

# Kaskad

A hybrid selected by Mazlumov All-Russian Research and Development Agricultural Institute  
Single-seeded sterile-base normal-type (N) diploid hybrid

## General information

### Hybrid type

Single-seeded sterile-base normal-type (N) diploid hybrid

### Yield indicators:

- potential sugar content: 18.4%
- potential yield: 47.6 t/ha
- sugar yield: 8.8 t/ha

### Morphology

- root crop shape: oval and conical
- Root crop embedding into soil: 80–90%

### Producing regions:

Central Black Earth (5), Central (3), Middle Volga (7)

Hybrid disease resistance:

---

Beet necrotic yellow vein virus

---

Cercosporosis

---

Ramularia leaf spot

---

Afanomycete rot

---

Powdery mildew

---

Root borer

---

---

Drought resistance

---

Premature seeding resistance

---

Harvesting period: medium
