

Ultramag Chelate Zn-15

Crystalline, completely water-soluble fertilizer for foliar and soil dressing of agricultural and garden plants, and greenhouse crops.

Advantages:

- Fully water-soluble chelate micro-fertilizer based on zinc EDTA chelate
- Prevention and rapid elimination of zinc deficiency in the nutrition of various agricultural and ornamental crops
- Regulates protein, lipid, carbohydrate, and phosphorus metabolism
- Stimulates biosynthesis of vitamins and growth substances - auxins
- Protects proteins and lipids from oxidative degradation
- Increases water-holding capacity of plants

Usage regulations

Crop	Method, time and conditions of application	Product consumption rate, kg/ha	Working liquid consumption rate, l/ha
Cereal, grain legume, industrial, and fodder crops	Foliar dressing 1-4 times during vegetation season every 7-14 days.	0.5-2.0 (max. mix concentration 0.1%)	200-400
Fruit and berry, and decorative crops, vineyards	Foliar dressing 1-4 times during vegetation season every 7-14 days.	0.1-1.0 (max. mix concentration 0.1%)	200-1000
Vegetable. flow and decorative crops	Foliar dressing 1-4 times during vegetation season every 7-14 days.	0.05-0.4 (max. mix concentration 0.1%)	200-1000

Industrial, fodder, vegetable, fruit and berry, flow and decorative crops, vineyards

Soil dressing during vegetation period (together with agricultural water).

5-7

Mix consumption rate – depending on watering rate

General information

Foliar fertilisers Ultramag Chelate Zn-15 (content in %wt, g/kg)

Content	%	g/kg
Zn	15,0	150,0

Storage conditions

Storage temperature range - minus 3 °C to plus 30 °C

Shelf life

5 years
