

Advantages:

Classic 5-agrotype hybrid

Middle-early hybrid of extensive type, with high productivity potential on all types of soil.

It has high early vigour at the initial stages of development. Highly plastic, responds well to soil fertility and classical tillage.

The average seeding rate is 60–65 thousand seeds/ha.

The hybrid is resistant to Broomrape races A to E.

General information

Producing regions: Central Black Earth (5), North Caucasus (6), Middle Volga (7), Lower Volga (8) and Ural (9)

Maturation period: 102–107 days, middle-early

Stem height: 150–160 cm

Yield potential: above 47 cwt/ha

Oil content: 50–53%

Hybrid resistance

To lodging and drought: resistant

To diseases: tolerant of Phomopsis, Sclerotinia, Botrytis and downy mildew
