Freya

Domestic hybrids

Advantages:

Classic 5-agrotype hybrid

Mid-season hybrid with high productivity potential in various cultivation conditions. It has a well-developed powerful root system and a strong stem, a very good self-pollinator.

Optimal crop density is 60–65 thousand/ha.

The hybrid is resistant to Broomrape races A to E.

Freya – Winner of the "**Breeding Breakthrough 2025**" award – Best Hybrid for Classical Technology - in the category **Frequency of Mention in Seed Consumer Surveys**

General information

Producing regions: Central Black Earth (5), North Caucasus (6), Middle Volga (7), Lower Volga (8) and Ural (9)

Maturation period: 95–100 days, mid-season

Plant height: above average, 170–200 cm

Yield potential: above 49 cwt/ha

Oil content: 48–51%

Hybrid resistance

To lodging: very resistant

To drought: high

Stress resistance: high

To diseases: tolerant to Sclerotinia and Botrytis, downy mildew; under field conditions, it is not affected by rust, Verticillium spp. and Alternaria spp.
