Comet

Domestic hybrids

Advantages:

Classic 5-agrotype hybrid

Middle-early hybrid with high productivity potential in various cultivation conditions. It has a well-developed powerful root system and a strong stem. Good self-pollinator.

Optimal crop density is 60–65 thousand/ha.

The hybrid is resistant to Broomrape races A to E.

General information

Producing regions: Central Black Earth (5), North Caucasus (6), Middle Volga (7)

Maturation period: 105–110 days, middle-early

Plant height: above average, 170–180 cm

Yield potential: above 47 cwt/ha

Hybrid resistance

To lodging: very resistant

To shedding: resistant

To drought: high resistance

Stress resistance: high

To diseases: tolerant to Sclerotinia, Botrytis and downy mildew
