

Bazik

Domestic hybrids

Advantages:

Classic 7-agrotype hybrid

Middle-early hybrid with high productivity potential in various cultivation conditions. It has a well-developed powerful root system and a strong stem. Good self-pollinator.

Optimal crop density is 60–65 thousand/ha.

The hybrid is resistant to Broomrape races A to G.

General information

Producing regions: Central Black Earth (5), North Caucasus (6), Lower Volga (8) and Ural (9).

The hybrid is recommended for cultivation in the Stavropol Territory, Tambov and Saratov regions.

Maturation period: 105–110 days, middle-early

Plant height: above 160–170 cm

Yield potential: above 47 cwt/ha

Oil content: 49.0–51.0%

Hybrid resistance

To lodging: very resistant

To shedding: resistant

To drought: resistant

To diseases: tolerant to Sclerotinia and Botrytis
