Krechet

Domestic hybrids

Advantages:

Hybrid resistant to imidazolinones

High productivity potential in various cultivation conditions, has a well-developed powerful root system and a strong stem, and is very resistant to lodging. Good self-pollinator. Optimal crop density is 55–60 thousand/ha.

The hybrid is resistant to Broomrape races A to E.

Krechet sunflower hybrid – winner of the "**Breeding Breakthrough 2025**" award – Best hybrid for cultivation under the Clearfield technology – in 3 nominations:

1. **Field trials**
2. **Market demand**
3. **Frequency of mention in seed consumer surveys**

General information

Producing regions: North Caucasus (6), Lower Volga (8)

Maturation period: 105–108 days, middle-early

Stem height: 170–180 cm, above average

Yield potential: above 47 cwt/ha

Oil content: 49.5–52.0%

Hybrid resistance

To lodging: very resistant

To drought: high resistance

Stress resistance: high

To diseases: tolerant to Sclerotinia and Botrytis, highly resistant to downy mildew
